# OF INTEREST TO THE WOMEN

## FROM WOMAN'S POINT OF VIEW

The chaperon, as she is known abroad, can never find a place in our independent American life, but there are grave reasons why girls in their teens should be shielded by the companionship of mother or some other older relative. I do not mean that young girls and masculine companions of their own age should not be allowed to mingle save under the watchful eye of a chaperon, but there should be well defined limits to such intimacy. There should not be theater trips and late suppers without a compani or tete-a-tete drives at night or calls lasting somewhere near the midnight hour, long after the other members of the family have retired.

It is a tax on the tired mother to play third to her daughter's callers, but it is a very necessary protection to a girl's happiness. We do not recognize the part impulse plays in life, the power it has to blast the future of more than one person. In a recent divorce case there figured a young man and woman who were the victims of impulse, and lived miserably for a half-dozen years. It is doubtful if matters will ever mend materially because there were two children who are to be equally shared through the year. The man was a guest at the young woman's birthday celebration and was one of a half-dozen invited to remain a while after the other guests had departed. The tired parents had retired when the young people decided to turn out the lights, sit on the floor around the log fire in the library and tell stories.

. . . . The man could never remember just how it happened, but a kiss had been given and the girl had asked him when he wanted to see her father before he fully woke to the situation. He faced it like a man, wooed and married the girl without loving her and brought no hap-piness to either himself or his bride. They struggled along till the second child arrived, and the girl's own father told me that those years of misery might have been prevented had he and his wife done their full duty and remained with the girl and her guests. The girl who is now growing into womanhood will be more carefully guarded.

I fancy hundreds of mothers would be horrified at the behavior of their daugh- we are told, built upon satisfactory lines, ters could they see them as does the public, in affectionate companionship with The American hip is inclined toward the men of various ages, in various places. exuberant, and grows more so with ad-I am quite sure that girls would not be vancing years. SELF-CONTROL ADDS TO EVERY PERSONALITY.

The grace of beautiful lines is not possible for very woman.

But the grace of beautiful movements is. The average woman moves far too rapidly to be

When she is young, all the hurriedness and crowdedness and nervousness of her life is in her gait and gesture.

When she grows old, she moves more slowly to be sure, but it is the slowness of feebleness rather than of poise. There is no grace in such slowness, of course.

Lack of vitality is always awkward. I know of nothing more thoroughly ungraceful than the lackadaisical slowness of a sickly girl. Health and vigor plus poise, abundant vitality

plus control, are the recipes for real grace. Practice walking slowly. Practice moving slowly. The girl who knows how to cross her first ball room with deliberate ease

in no wise hurried by the consciousness of being the "cynosure of neighboring eyes" has a great advantage over the girl who rushes with nervous haste to her seat. The head of a dramatic school said that one of the hardest things he

had to teach his pupils was to walk slowly enough to appear graceful upon the stage. Rapid motion is like much ornamentation on a gown. It covers de-

fcets. Slow motion reveals defects and hence helps to eliminate them. The psychological effect of controlled motion is greater than most

In one of the Western States a unique prison system was installed some years ago. By this system the criminals who were guilty of some crime caused by sudden passion-murder or assault or some similar actinstead of being subjected to the torture of solitary confinement or the dull round of ordinary prison labor, are set at work at some task which requires most careful and controlled movements.

They are often given, for instance, the most minute and precise part of watch-making to do. The slightest hasty movement means the destruction of the work of

days or weeks. Under these conditions their whole natures change.

Self-control becomes a habit. Ill-considered impulse and passion are entirely conquered, and sane men are sent back into the world all through the application of this principle.

Grace of motion is a beautiful thing to acquire. And if through becoming captain of your body, you become also "captain of your soul," isn't it doubly worth while? RUTH CAMERON.
